Russian Zvezda dock with Space Station successful

The 21-ton service module Zvezda linked up with the 37-ton International Space Station at 7:45 p.m. CDT Tuesday. The \$340 million module will serve as the brains of the growing facility in its initial phase. It will provide life support and living quarters, propulsion for boosting altitude and maintaining proper orientation, electrical power distribution throughout the complex, data processing and communications.
